1965
FARM BUSINESS SUMMARY

ERIE COUNTY

The Extension Service in New York State has developed Farm Business Management Projects to help farm families improve their managerial skills. These projects were conducted in 44 counties in 1965. Erie was one of the participating counties.

Records are a basic feature in these projects. Records can serve as a valuable tool in managing a farm business. Records for any business provide the information needed for making a management summary and analysis.

This summary report is prepared in workbook form to help you summarize and analyze your business. It provides the framework for a systematic study of a farm operation.

The 1965 records from Erie County farms have been used to get the group averages included in this report. These can be used as a benchmark for making comparisons. Figures have also been included from a general summary made of 434 dairy farms from 26 counties which were in Farm Business Management Projects in 1964. You can compare your business not only with the Erie County farms but also with those of farmers from other counties across New York State.

It is hoped that your participation in this Farm Business Management Project will help you to develop a systematic approach to management problems. This in turn can give you a better income and a higher level of living.

This summary prepared by C. A. Bratton, Department of Agricultural Economics, New York State College of Agriculture, in cooperation with T. Jorgensen of the Erie County Extension Service.

B00003422B

GOOD DECISIONS ARE THE CRUX OF SOUND MANAGEMENT!

Steps in making a management decision:

1. Locate the trouble spot (problem)
2. What is your objective? (goal)
3. Size up what you have to work with (resources)
4. Look for various ways to solve the problem (alternatives)
5. Consider probable results of each way (consequences)
6. Compare the expected results (evaluate)
7. Select way best suited to your situation (decision)
8. Put the decision into operation (action)

Have you developed a systematic approach to management problems?

How do you measure up as a manager?

NEW YORK FARM PRICES OF DAIRY COWS AND MILK, 1961-1965

Source: Current Economic Situation.

Prices are one of several important factors affecting farm incomes. When studying farm incomes for any year, consideration must be given to the price situation. This includes both prices received and prices paid. The relationship of prices received and prices paid by farmers determines the general level of farm incomes.

The blended New York farm price for 3.7% milk in 1965 averaged \$4.38 per hundredweight. This was six cents higher than the average for 1964. Dairy cow prices which declined from 1960 to 1963 held steady in 1965. The overall index of prices paid by New York dairy farmers continued to rise in 1965. Machinery, wages, feed and building materials were up, milk cows and fertilizer were the same, and seeds were down. The index of prices paid has risen about two percent per year during the past decade.

AVERAGE YEARLY PRICES RECEIVED AND PAID BY N. Y. FARMERS, 1956-65

Year	Milk (cwt.)	Dairy cows (head)	Prices paid by N. Y. dairy farms (1910-14=100)	Year	Milk (cwt.)	Dairy cows (head)	Prices paid by N. Y. dairy farms (1910-14=100)
1956	\$4.20	\$180	352	1961	\$4.32	\$260	394
1957	4.58	196	363	1962	4.26	245	401
1958	4.55	255	376	1963	4.26	234	409
1959	4.58	284	386	1964	4.32	237	414
1960	4.42	278	393	1965*	4.38	237	421

* Preliminary.

PART I - SUMMARY OF THE FARM BUSINESS

This part is to help you systematically summarize your business. It provides for an examination of the physical resources, capital investment, receipts, expenses, and the financial summary for the year.

Physical Resources

Each farm family must make their management decisions on the basis of the things they have to work with. Therefore, in analyzing a farm business, a first step is to look at the resources. This includes both the physical and financial things that are available. Below are the averages and ranges for the physical resources of this Erie County group for 1965.

FARM ORGANIZATION
12 Erie County Dairy Farms, 1965

Item	Average or No. reported	Your farm	Range	
			Low	High
<u>Labor:</u>				
Months of:				
Operators	(12 farms)	15.0	_____	
Family paid	(6 farms)	2.2	_____	
Family unpaid	(5 farms)	1.0	_____	
Hired	(6 farms)	3.8	_____	
Total		22.0	_____	
Man equivalent (No. men)		1.8	_____	1.2 3.2
<u>Livestock: (Number)</u>				
Cows		51	_____	30 83
Heifers		34	_____	4 70
<u>Crops: (Acres grown)</u>				
Hay		74	_____	40 127
Grass silage	(6 farms)	29	_____	5 85
Corn for silage	(11 farms)	21	_____	10 35
Oats	(9 farms)	21	_____	10 43
Total acres of crops		145	_____	70 235

Production records are another useful management tool on a dairy farm. Of the 12 farms, 7 were in D.H.I.A., 3 had owner-sampler records, and 2 reported no production records.

Age of operators were reported as: Under 30 - 1; 30 to 39 - 5; 40 to 49 - 5; 50 or over - 0; not reported - 1.

Capital Investment

Capital resources are essential in any business. They make it possible to assemble the physical resources of machinery, livestock, and land and buildings. Some of the capital used in a farm business is owned by the operator and some is borrowed. Here we consider all capital used whether owned or borrowed. The farm inventory at the end of the year is used as the measure of capital investment.

FARM INVENTORY VALUES, January 1, 1966 12 Erie County Dairy Farms

Item	Amount per farm		Amount per cow	
	Your farm	Av. 12 farms	Your farm	Av. 12 farms
Machinery and equipment	\$ _____	\$16,963	\$ _____	\$ 333
Cattle	_____	22,458	_____	440
Feed and supplies	_____	5,274	_____	103
Land and buildings	_____	33,925	_____	665
TOTAL INVESTMENT	\$ _____	\$78,620	\$ _____	\$1,541

Total investment on these 12 farms ranged from \$38,000 to \$117,000. Six of the farms had investments of more than \$75,000.

On these farms, the amount invested in machinery and cattle combined exceeded the value of the real estate. In recent years, the personal property has been increasing in importance compared with the real property. This is happening even though real estate values have been rising steadily.

Below are some capital investment factors:

<u>Item</u>	<u>Your farm</u>	<u>Av. 12 farms</u>	<u>Av. 434 N.Y. farms</u>
Total investment per man	\$ _____	\$43,700	\$34,500
Land & building investment per acre of crops	\$ _____	\$234	\$268
% Land & buildings are of total investment	_____ %	43%	47%
Capital turnover (years for receipts to equal investment)	_____	2.1	2.3

Receipts

In any commercial enterprise, it is essential that there be a sizeable gross income. Unless there is a reasonable amount of receipts, one cannot expect to have much net income.

FARM RECEIPTS
12 Erie County Dairy Farms, 1965

Item	Your farm	Average of 12 farms	Percent of total
Milk sales	\$ _____	\$27,397	85
Livestock sold	_____	2,699	8
Crop sales	_____	178	1
Machinery sold	\$ _____	\$233	6
Government payments	_____	164	
Work off the farm	_____	297	
Custom machine work	_____	658	
Gas tax refunds	_____	233	
Other miscellaneous	_____	314	
Total cash farm receipts	\$ _____	\$32,173	100
Increase in inventory	_____	5,648	
TOTAL FARM RECEIPTS	\$ _____	\$37,821	

Total cash receipts on these 12 farms averaged \$32,173 per farm in 1965, or \$88 per day. Milk sales accounted for 85 percent of the cash receipts.

Increases in inventory are usually due to expansion in the business. For 1965, the average increase on these farms was \$5,648. Machinery had an increase of \$1,960, and land and buildings \$1,308, while livestock increased \$1,652, and feed increased \$728. Inventory increases are considered as farm receipts.

Income Analysis

	<u>Your farm</u>	<u>Average per farm</u>
Average price per cwt. of milk sold	\$ _____	\$4.30
Milk sales per cow	\$ _____	\$537
Total cash receipts per man	\$ _____	\$17,900
Total cash receipts per acre of crops	\$ _____	\$222
Total cash receipts per \$1,000 investment	\$ _____	\$409

Expenses

A good manager keeps his eye on the expenditures. Expenses can be too low as well as too high. Good information on actual expenses is the first step toward expense control.

FARM EXPENSES
12 Erie County Dairy Farms. 1965

Item	Your farm	Average of 12 farms	Percent
Hired labor	\$ _____	\$1,575	8
Dairy concentrates bought	_____	6,399	34
Other feed (hay, etc.)	_____	17	-
Machine hire	_____	289	2
Machinery expense	_____	1,403	8
Auto expense (farm share)	_____	248	1
Gas and Oil	_____	923	5
Breeding fees	_____	291	2
Veterinary & medicine	_____	464	2
Other livestock expense	_____	1,866	10
Lime and fertilizer	_____	1,423	8
Seeds and plants	_____	354	2
Spray and other crop expense	_____	319	2
Building expense	_____	381	2
Taxes & insurance (\$600 & \$415)	_____	1,015	5
Electricity & telephone	_____	453	2
Miscellaneous	_____	<u>1,219</u>	<u>7</u>
TOTAL CASH OPERATING EXPENSE	\$ _____	\$18,639	100
New machinery	\$ _____	\$4,354	
Real estate	_____	1,242	
Livestock purchases	_____	1,708	
Unpaid labor	_____	150	
Decrease in inventory	_____	--	
TOTAL FARM EXPENSE	\$ _____	\$26,093	

The total farm expenses on these 12 farms averaged \$71 per day, or \$512 per cow.

Financial Summary of Year's Business

The returns from a farm business can be measured in several ways. Two are used here--labor income and farm cash operating income.

LABOR INCOME
12 Erie County Dairy Farms, 1965

Item	Your farm	Average of 12 farms
Total Farm Receipts	\$ _____	\$37,821
Total Farm Expenses	_____	<u>26,093</u>
Farm Income	\$ _____	\$11,728
Interest on Capital @ 5% (\$75,796)	_____	<u>3,790</u>
LABOR INCOME per farm	\$ _____	\$ 7,938
Number of operators on 12 farms	_____	15
LABOR INCOME per operator	\$ _____	\$ 6,350

"Labor Income" is a measure of the return the farm operator receives for his labor and management. It is the amount left after paying all farm expenses, and deducting a charge for unpaid labor and for interest on the capital invested.

Interest payments and payments on debts are not included in the farm expenses. To make all farms comparable, a five percent interest charge on the average capital investment is deducted to get labor income.

The average labor income per operator was \$6,350 or \$529 per month. In addition, the family had a house to live in and some farm produced food. The labor incomes ranged from \$1,295 to \$12,000 per operator. There were six farms with over \$7,500 labor income per operator.

FARM CASH OPERATING INCOME
12 Erie County Farms, 1965

Item	Your farm	Average 12 farms
Total cash farm receipts	\$ _____	\$32,173
Total cash operating expenses	_____	<u>18,639</u>
FARM CASH OPERATING INCOME (available for family living, capital purchases, debts, etc.)	\$ _____	\$13,534

PART II - ANALYSIS OF THE FARM BUSINESS

This part includes guidelines to use in studying the important factors in your business. The averages for 434 New York State dairy farms in 1964 and the averages for the ten percent with the highest labor incomes for 1964 are given for making comparisons.

Four farm business factors are examined here. They are: size of business, rates of production, labor efficiency, and cost control. Farm management research has repeatedly shown these to be major factors affecting income.

Business Factor: Size of Business

Size is an important factor in any business. It affects other factors such as labor and capital efficiency, and cost control. In general, the larger farms make higher incomes, but at the same time some of the larger farms have large losses.

MEASURES OF SIZE OF BUSINESS

Measure	Your farm	12 Erie County farms, 1965	434 N. Y. State dairy farms, 1964	
			Average	Top 10%*
Number of cows	_____	51	40	55
Pounds of milk sold	_____	636,900	450,400	674,600
Man equivalent	_____	1.8	1.7	2.0
Total work units	_____	676	507	693

* The 10 percent of the farms with highest labor incomes.

Above are four measures of size. The 12 Erie County farms averaged somewhat larger than the 434 farms but smaller than the ten percent with the highest labor incomes.

In the table below, the 434 farms are sorted into various size groups with the average labor income for each group.

COWS PER FARM AND LABOR INCOME 434 New York Dairy Farms, 1964

Number of cows	Number of farms	Labor income per operator
Under 20	11	\$ 695
20 - 29	93	\$2,080
30 - 39	144	\$3,029
40 - 49	99	\$3,345
50 - 59	48	\$2,857
60 & over	39	\$4,801

Business Factor: Rates of Production

Rates of production for both animals and crops have long been important factors contributing to the success of a farm business. The operator must strive to find the level of inputs, such as feed and fertilizer, which will give the highest net income. Few farmers exceed this level whereas many fall short.

MEASURES OF RATES OF PRODUCTION

Measure	Your farm	12 Erie County farms, 1965	434 N. Y. State dairy farms, 1964	
			Average	Top 10%*
Lbs. of milk** sold/cow	_____	12,500	11,260	12,300
Tons of hay per acre	_____	2.8	2.0	2.1
Tons of corn silage/acre	_____	15	12	14
Bushels of oats/acre	_____	73	51	54

* The 10 percent of farms with highest labor incomes.

** Average test 3.6%.

Pounds of milk sold is used in measuring the output on dairy farms. Production per cow is calculated by dividing total pounds of milk sold by the average number of cows for the year. Pounds sold per cow is less than that produced as shown by D.H.I.A. because of milk used on the farm and spillage.

The pounds of milk sold per cow for the 12 farms averaged 12,500. This compares with 11,260 pounds for the 434 farm business management project farms in 1964 and 12,300 for the ten percent of the farms with the highest labor incomes. The range for the 12 farms was from 9,900 to 15,100 pounds sold per cow.

The effect of pounds of milk sold per cow on labor income is illustrated below. In each of the three size groups, the farms with high production had an average labor income considerably higher than those with low production.

MILK SOLD PER COW AND LABOR INCOME
434 New York Dairy Farms, 1964

Pounds milk sold per cow	Farms with less than 30 cows		Farms with 30 - 49 cows		Farms with 50 cows and over	
	Number of farms	Labor income	Number of farms	Labor income	Number of farms	Labor income
Under 10,000	39	\$1,097	56	\$1,973	17	\$- 142
10,000 - 11,999	34	\$2,086	92	\$2,768	34	\$4,013
12,000 & over	31	\$2,821	95	\$4,235	36	\$5,288

Business Factor: Labor Efficiency

Labor efficiency is sometimes claimed to be the most important single factor on farms today. This is brought about by the rapidly rising wage rates. If a farmer wants top efficiency from his hired man's time as well as his own, he must keep a close watch on the factors which affect labor efficiency.

MEASURES OF LABOR EFFICIENCY

Measure	Your farm	12 Erie County farms, 1965	434 N. Y. State dairy farms, 1964	
			Average	Top 10%*
Lbs. of milk** sold/man	_____	353,800	264,900	337,300
Number of cows per man	_____	28	24	28
Work units per man	_____	376	298	346
Crop acres per man	_____	81	61	70

* The 10 percent of farms with highest labor incomes.

** Average test 3.6%.

The 12 Erie County farms sold an average of 353,800 pounds of milk per man in 1965. The range was from 199,400 to 620,000 pounds per man. Three farms sold more than 400,000 pounds per man. The average for the top ten percent in 1964 was 337,300 pounds per man.

When labor efficiency is related to labor income as in the table below, two points show up. One is that the more pounds of milk sold per man the higher the labor income per operator. The other is that a much higher percentage of the large farms have high labor efficiency. One-fourth of the large farms sold 350,000 pounds or more milk per man, while none of the small-size group accomplished this.

POUNDS OF MILK SOLD PER MAN AND LABOR INCOME 434 New York Dairy Farms, 1964

Pounds milk sold per man	Farms with less than 30 cows		Farms with 30 - 49 cows		Farms with 50 cows and over	
	Number of farms	Labor income	Number of farms	Labor income	Number of farms	Labor income
Under 250,000	77	\$1,391	94	\$2,024	21	\$2,132
250,000 - 349,999	27	\$3,482	109	\$3,400	44	\$3,378
350,000 & over	0	---	40	\$5,165	22	\$5,953

Business Factor: Cost Control

Cost control has been growing in importance on farms. As more "input" items are purchased, cost control has a larger effect on incomes. Cost control is difficult to measure. However, keeping good records and making use of them can give you some useful checks.

Feed, labor, and machinery are major cost items on dairy farms and can easily get out of line. On the next two pages, you can study your costs for these three input items.

FEED COSTS

Item	Your farm	12 Erie	434 N. Y. State	
		County	dairy farms, 1964	
		farms, 1965	Average	Top 10%*
<u>Purchased Feed</u>				
Dairy feed bought	\$ _____	\$6,399	\$6,206	\$8,386
Feed bought per cow	\$ _____	\$125	\$155	\$152
Feed bought as % of milk receipts	_____ %	23%	31%	29%
Feed bought/cwt. of milk sold	\$ _____	\$1.00	\$1.38	\$1.24
Total crop expense** per cow	\$ _____	\$41	\$31	\$35
Feed bought and crop expense/cow	\$ _____	\$166	\$186	\$187
<u>Roughage Harvested (hay equivalent)</u>				
Hay (tons)	_____	210	142	180
Silage (tons ÷ 3)	_____	128	64	121
Total tons hay equivalent	_____	338	206	301
Tons hay equivalent/cow	_____	6.6	5.1	5.5
<u>Other Considerations</u>				
Total acres in crops/cow	_____	2.8	2.6	2.5
Tons H. E. per acre in crops	_____	2.3	2.0	2.2
Number of heifers per 10 cows	_____	6.7	6.0	6.2

* The 10 percent of the farms with the highest labor incomes.

** Lime and fertilizer, seeds, spray and other crop expense.

The percent feed bought was of milk receipts ranged from a low of 11 percent to a high of 42 percent. Eight farms had 25 percent or less of the milk receipts going for feed bought.

In addition to the quantity of roughage harvested, one must also consider the quality. Time of harvest is an important factor affecting quality of hay. Did you complete your first cutting by July 4? _____

Labor and Machinery Costs are sizeable on a dairy farm. It is important to keep these under control. Since labor and machinery work as a team, it is well to study them together.

POWER AND MACHINERY COSTS

Item	Your farm	12 Erie County farms, 1965	434 N. Y. State dairy farms, 1964	
			Average	Top 10%*
Beginning inventory	\$ _____	\$15,003	\$11,597	\$14,667
New machinery bought	_____	4,354	2,556	3,297
Total	\$ _____	\$19,357	\$14,153	\$17,964
End inventory	\$ _____	\$16,963	\$12,591	\$16,080
Machinery sold.	_____	233	89	215
Total	\$ _____	\$17,196	\$12,680	\$16,295
Depreciation	\$ _____	\$ 2,161	\$ 1,473	\$ 1,669
Int. @ 5% av. invt.	_____	800	605	768
Gas and oil	_____	923	694	845
Machinery repairs	_____	1,403	756	898
Bale ties	_____	88	107	143
Milk hauling	_____	996	352	349
Machine hire	_____	289	104	189
Auto expense (f.s.)	_____	248	153	136
Electricity (f.s.)	_____	355	327	462
Total power and machinery cost	\$ _____	\$ 7,263	\$ 4,571	\$ 5,459
Less: Gas tax ref.	\$ _____	\$233	\$135	\$180
Income from machine work	_____	658	73	96
NET POWER AND MACHINERY COST	\$ _____	\$ 6,372	\$ 4,363	\$ 5,183

Net power & mach. cost:				
per cow	\$ _____	\$125	\$109	\$94
per crop acre	\$ _____	\$44	\$42	\$37
per man	\$ _____	\$ 3,540	\$ 2,567	\$ 2,730
per cwt. milk sold	\$ _____	\$1.00	\$0.97	\$0.77

* The 10 percent of the farms with the highest labor incomes.

Farmers frequently justify high machinery costs on the basis that the machinery saves labor. The combined machinery and labor cost measure gives a good check. In the table below, the effect of labor and machinery costs on income can be observed.

LABOR AND POWER AND MACHINERY COSTS

Item	Your farm	12 Erie County farms, 1965	434 N. Y. State dairy farms, 1964	
			Average	Top 10%*
Value of operators' labor**	\$ _____	\$ 4,500	\$3,924	\$ 3,683
Hired labor	_____	1,575	1,170	2,529
Unpaid family labor	_____	150	367	366
TOTAL LABOR COSTS	\$ _____	\$ 6,225	\$5,461	\$ 6,578
Net power & mach. cost	_____	6,372	4,363	5,183
TOTAL LABOR & MACH. COSTS	\$ _____	\$12,597	\$9,824	\$11,761

Total per cow	\$ _____	\$247	\$246	\$214
Total per crop acre	\$ _____	\$87	\$94	\$84
Total per man	\$ _____	\$ 6,998	\$5,779	\$ 5,881
Total per cwt. milk sold	\$ _____	\$1.98	\$2.18	\$1.74

* The 10 percent of the farms with the highest labor incomes.

** Valued at \$3,600 per operator.

On these Erie County dairy farms, the power and machinery cost was just about the same as the labor cost. In other words, for each dollar spent for labor, a dollar was also spent for mechanization.

The following table shows the relationship of combined labor and machinery costs to labor and income.

LABOR AND MACHINERY COST PER COW AND LABOR INCOME 434 New York Dairy Farms, 1964

Cost per cow	Farms with less than 30 cows		Farms with 30 - 49 cows		Farms with 50 cows and over	
	Number of farms	Labor income	Number of farms	Labor income	Number of farms	Labor income
Under \$250	26	\$2,537	144	\$3,836	61	\$4,455
\$250 - \$349	60	\$2,260	90	\$2,173	26	\$2,025
\$350 & over	18	- \$23	9	\$2,170	0	---

There are many costs in operating a farm. It is essential that one control the major items, but it is also important to watch the smaller costs too. Small leaks can build up into sizeable losses. Below are some measures which can be used in exercising overall cost control.

COST CONTROL MEASURES

Item	Your farm	12 Erie County farms, 1965	434 N. Y. dairy farms 1964
Feed bought/cow	\$ _____	\$125	\$155

Total expenses/cow	\$ _____	\$512	\$489
Total expenses/\$100 rcts.	_____	69	76

FARM BUSINESS CHART

The chart on this page is a tool for use in analyzing a farm business. It is essentially a series of measuring sticks. The top figure in each column is the average of the top ten percent of the farms for that factor. The next figure in the column is for "the next best ten percent," etc. The last figure is the bottom ten percent.

For each column, draw a line to show where your farm stands.

FARM BUSINESS CHART FOR FARM MANAGEMENT COOPERATORS
434 New York Dairy Farms,* 1964

No. of cows	Total work units	Size		Rates of Production		
		Man equiva- lent	Pounds 3.7 milk sold	Pounds 3.7 milk sold per cow	Tons hay per acre	Tons corn silage per acre

* These farms are considerably above the average for all farms in the State. For example, the median number of cows for the 434 farms was 36.5 compared with 31.5 for all farms in the State.

CHANGES ON NEW YORK DAIRY FARMS

In 1960, the Department of Agricultural Economics at Cornell started a research study of the changes in milk production in New York. A random sample of farms was selected. The sample farms were visited in June each year from 1960 to 1965 to obtain information on changes that had been made.

The sample of farms studied included a 2.5 percent sample of the dairy farms in the New York Milkshed and a 5 percent sample of the Hudson Valley area. Farms delivering to all markets in New York State, and those located in New York State but delivering to New England markets were included. The sample included 1,073 farms in 1960. From this sample, estimates can be made for the entire State or the Milkshed.

Results from this study point up the major changes made in the past five years. Based on this, we can make an estimate of the situation which may exist five years ahead or 1970. It is important to look ahead as you make long-term plans for your business.

Item	New York State situation in:		% Change 1960 to 1965	Your estimate 1970

FINANCIAL SITUATION AND MANAGEMENT

The financial summary for 126 dairy farms in Cayuga, Delaware, Ontario, and Otsego counties is presented for comparison purposes. These farms were included in a credit study made in 1962 and repeated in 1964. The information shows some of the financial changes which occurred on these 126 farms in the two year period.

NEW YORK DAIRY FARMS AND THEIR COMPETITION

Many states conduct farm business analysis projects similar to the one in which New York farmers participate. Summary results from three other states are reported here for comparison with New York dairy farms. How would you rate New York's position with this outside competition?

Factor	434 New York Dairy Farms 1964	83 Maine and New Hampshire Dairy Farms 1964	723 Wisconsin Dairy Farms 1964	68 Indiana Dairy Farms 1964
Crop acres	104	N.R.	147	196
Man equivalent	1.7	2.0	1.6	1.7

BUDGETING

When a farm manager considers making a change in his business, there are usually two or three alternatives for consideration. The outline below is a guide to help compare these alternatives. If the change is to be a major one, the farm manager may wish to consult with his county agricultural agent since he is experienced in the techniques of budgeting and has in his possession reference material that is helpful when comparing alternatives.
